

CERTIFIED ASSOCIATE IN PROJECT MANAGEMENT

OVERVIEW

The Certified Associate in Project Management (CAPM)[®] is a valuable entry-level certification for project practitioners. Designed for those with little or no project experience, the CAPM[®] demonstrates your understanding of the fundamental knowledge, terminology and processes of effective project management. The PMBoK 6th Edition compared to the PMBoK of previous editions has a clear emphasis on adaptive or agile models in addition to the traditional and predictive waterfall model. Whether you're a student but with a few years of work experience, new to project management, changing careers, or already serving as a subject matter expert in project teams, the CAPM[®] can get your career on the right path or take it to the next level

TARGET MARKET

New project managers, project team members and those interested in project management best practices who have yet to attain more than 4,500 hours of project management experience required to take the PMP[®] examination

CERTIFICATION

By attending this course, the CAPM[®] candidates will have achieved the following:

- 28 Professional Development Units (PDUs)
- 28 hours of formal training towards the CAPM[®] certification
- CAPM[®] test fee is at USD225 (for PMI member), USD300 (non-member) payable to PMI
- CAPM[®] expires after 5 years after passing, whereby candidates can progress to take the PMP[®] examination
